**DETAILED ACTION**

***Claim Rejections - 35 USC § 101***

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-14 are rejected under 35 U.S.C. 101 because the disclosed invention is inoperative and therefore lacks utility. The disclosed and claimed "demultiplexer" cannot perform the functions as stated because, as it is known in the art, a conventional demultiplexer has only one input and at least two output, it cannot demultiplex the two input signals and output the single output signal as claimed. Since the disclosed invention cannot be constructed to perform the functions as claimed, it is inoperative.

***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, line 10, "the plurality of converters" lack proper antecedent basis.

***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 2, 5-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Gove et al. (5,526,051). (The claims are being rejected based on Examiner's best understanding of the invention.)

Regarding claim 2, Gove discloses a digital television system showing a line slicer 14 for dividing an input image into a plurality of parts, which meet the formatter as claimed, a plurality of format converters (72a-72c) for performing deinterlacing functions, which meet the plurality of formatter converters as claimed, and a formatter 24a (Figure 29) for combining the converted video parts into a single video signal, which meets the demultiplexer as claimed.

Regarding claim 5, the timing and control circuit 28 in Gove meets the controller as claimed.

Regarding claim 6, Gove shows that the timing of each of the converters are regulated in reference to left channel video part as illustrated in Figure 3, which meets the start phase adjustment as claimed.

Regarding claim 7, Gove shows that the sliced video parts are sequentially provided to the converters as illustrated in Figure 6.

### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Fraser et al. (5,430,486) shows a plurality of divided video parts (Figure 2).
